

Bioethanol: Fueling Forward to Net-Zero

BIOETHANOL IS BETTER FOR:

YOUR HEALTH

By displacing hydrocarbon substances like aromatics in gasoline, bioethanol helps reduce emissions of air toxins, particulate matter, carbon monoxide, nitrous oxides and exhaust hydrocarbons.

OUR ENVIRONMENT

Bioethanol is a biodegradable, high-octane fuel derived from the sugars, starches and cellulose in plants. Bioethanol is a renewable resource which helps reduce our reliance on petroleum – a finite resource.

GLOBAL CONSUMERS

Drivers are using a cleaner burning, higher octane and lower priced option when they fill up with bioethanol. It's better for our air, our engines and our wallets.
